SCENE SETTER

OPENING

Welcome to the **TACTICAL COMBAT CASUALTY CARE COURSE FOR ALL SERVICE MEMBERS (TCCC ASM)**

- SECDEF has directed ALL service members be trained and proficient in basic lifesaving TCCC skills
- TCCC ASM Course replaces current military first aid courses
- This evidence-based training reflects the casualty care lessons of nearly two decades of war and has the potential to significantly reduce preventable prehospital trauma-related deaths
- Invest fully in this course: the dividend will be in the lives saved

CENTRAL OBJECTIVE

By the end of this course,
you will know the fundamental concepts of

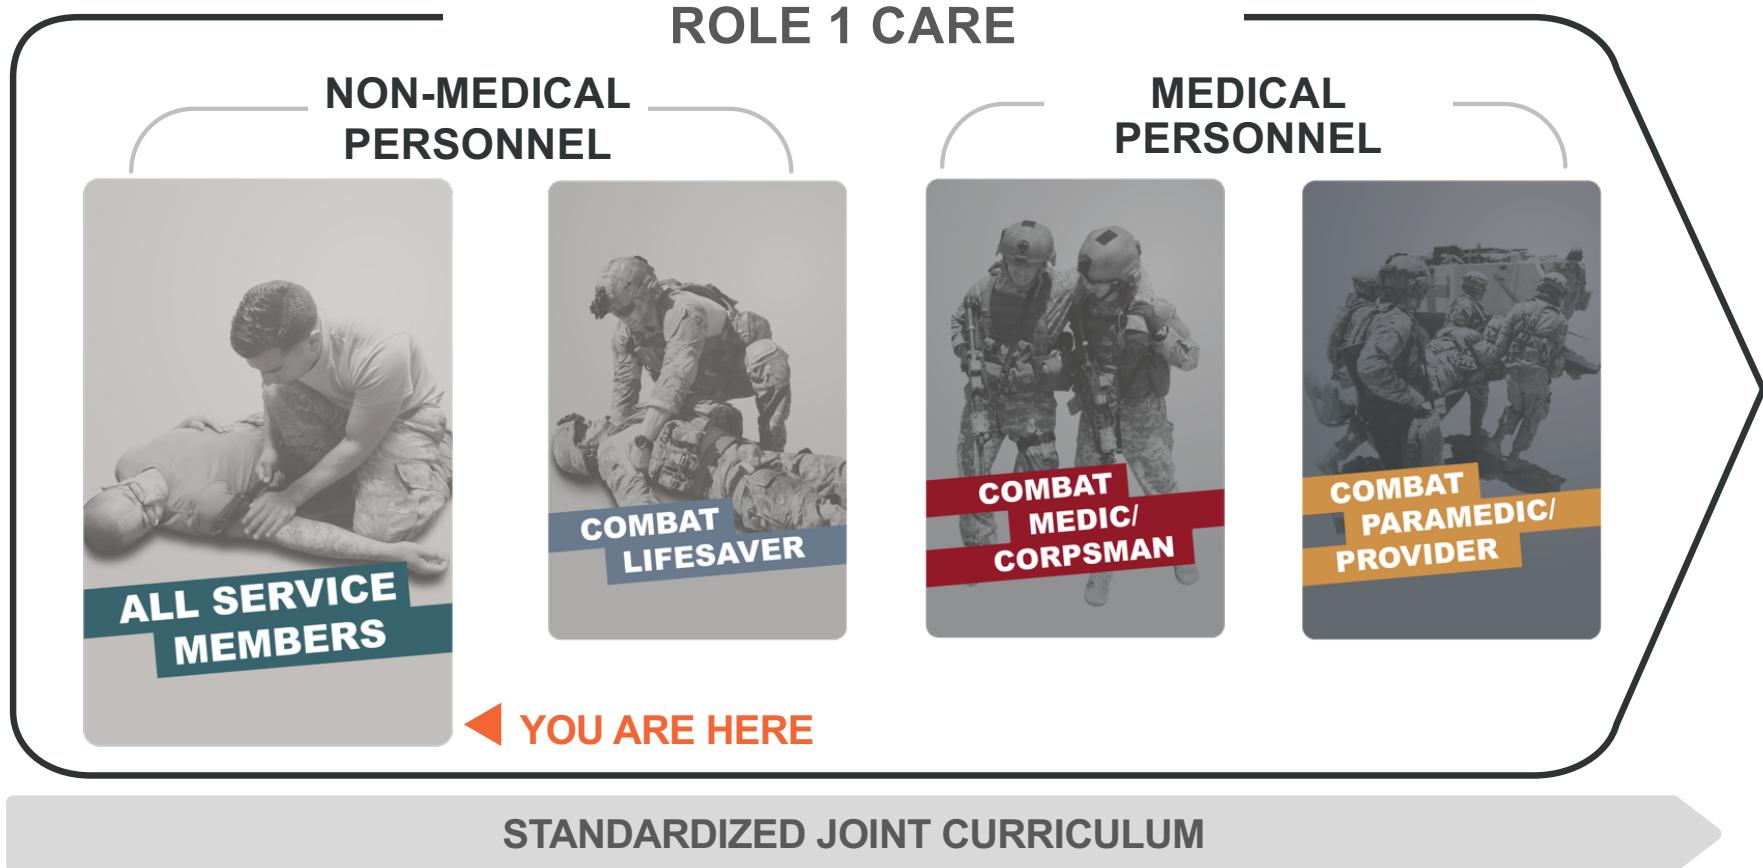

TACTICAL COMBAT CASUALTY CARE

and be able to perform

5 LIFESAVING SKILLS

at a basic competency level

TACTICAL COMBAT CASUALTY CARE (TCCC) ROLE-BASED TRAINING SPECTRUM

10 TERMINAL LEARNING OBJECTIVES (TLOs)

01

Describe the practice of TCCC

**02**

Describe the use of a first aid kit

**03**

Perform a rapid casualty assessment

**04**

Demonstrate basic care for a casualty with massive bleeding

**05**

Demonstrate basic care for a casualty with a compromised airway or in respiratory distress

**06**

Describe the basic care of burns

**07**

Describe the basic care of fractures

**08**

Describe the basic care of an eye injury

**09**

Identify a head injury

**10**

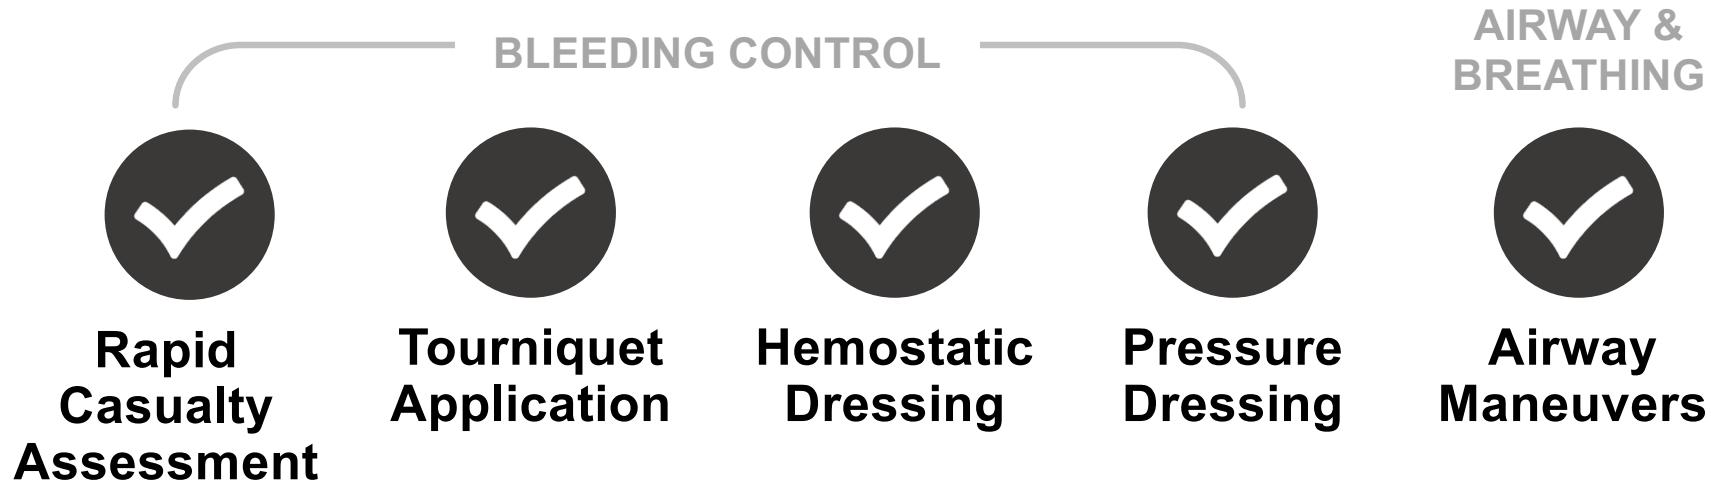

Describe point of injury communication strategies and casualty care documentation

37 ENABLING LEARNING OBJECTIVES (ELOs)

● = Cognitive ELOs ● = Performance ELOs

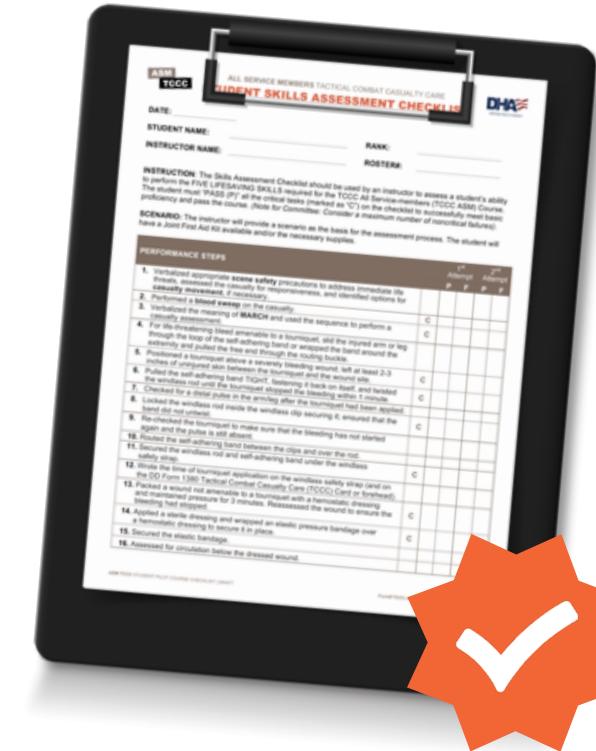

You **MUST** be able to perform these
LIFESAVER SKILLS:

HOW YOU WILL BE EVALUATED

The student must pass the **Skills Assessment** of the TCCC ASM Course

There is no formal, written examination

Three PHASES of TCCC are born out of years of war and lives lost:

1 CARE UNDER FIRE/THREAT

NOT SAFE

- Quick decision-making:
- Ensure scene safety
 - Move casualty to safety
 - Identify and control life-threatening bleeding

2 TACTICAL FIELD CARE

SAFER

- Quick decision-making:
- Provide medical aid

3 TACTICAL EVACUATION CARE

Care provided during transport to advanced medical care, wherever appropriate depending on the trauma scenario

NOTE: This is covered in more advanced TCCC training!

PHASE 1: CARE UNDER FIRE OR THREATS

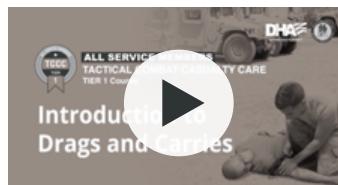

SCENE SAFETY

Using available resources, ensure scene safety
Never attempt to rescue a casualty until the scene is SAFE

CASUALTY MOVEMENT

PLAY VIDEO

HASTY TOURNIQUET

For life-threatening bleeding, place a TQ **"high and tight"** on the wounded extremity

COMMUNICATION

Check the casualty for responsiveness and reassure
Seek help

IMPORTANT CONSIDERATIONS:

- Order of actions will be dictated by the situation
- A casualty may be able to perform self aid
- Constantly assess risks/threats and make a plan before moving a casualty

PHASE 2: TACTICAL FIELD CARE

Use the MARCH sequence to
guide you through a
RAPID CASUALTY ASSESSMENT

- M**ASSIVE BLEEDING
(#1 Priority)
- A**IRWAY
- R**ESPiration/BREATHING
- C**IRCULATION
- H**YPOTHERMIA
...then, tend to other injuries

THESE ARE THE **MEDICAL SUPPLIES** YOU WILL NEED TO PROVIDE AID:

- Tourniquet
- Hemostatic Dressing
- Pressure Bandage/
Emergency Trauma Dressing
- DD Form 1380/
Tactical Combat Casualty
Care Card

PERSONAL Joint First Aid Kit (JFAK)

Individual First Aid Kit
(IFAK)

First Aid Box

M A R C H

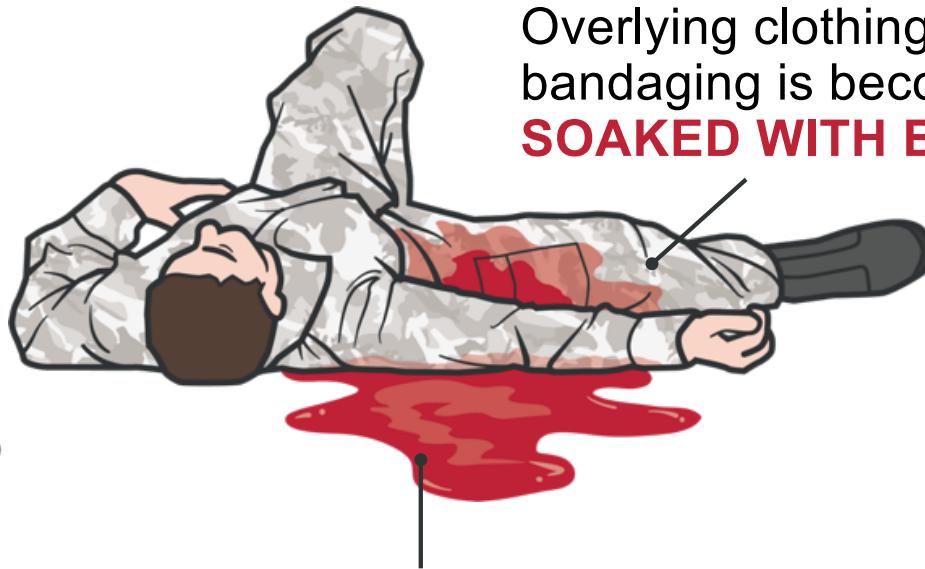

MASSIVE BLEEDING

MASSIVE BLEEDING

HOW TO RECOGNIZE MASSIVE, LIFE-THREATENING BLEEDING

BRIGHT RED BLOOD

is pulsing, spurting or steady bleeding from the wound

Overlying clothing or ineffective bandaging is becoming
SOAKED WITH BLOOD

IMPORTANT! Casualties with severe injuries can bleed to death in *as little as 3 minutes*

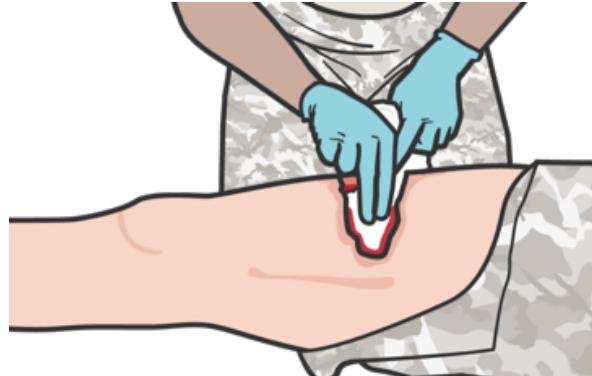

BRIGHT RED BLOOD
is pooling on the ground

AMPUTATION of the arm or leg

**Three tools in your first aid kit can be used to
CONTROL MASSIVE BLEEDING!**

TOURNIQUET

**HEMOSTATIC
DRESSING**

**PRESSURE
BANDAGE**

M A R C H

MOST COMMON **COMBAT APPLICATION TOURNIQUET**

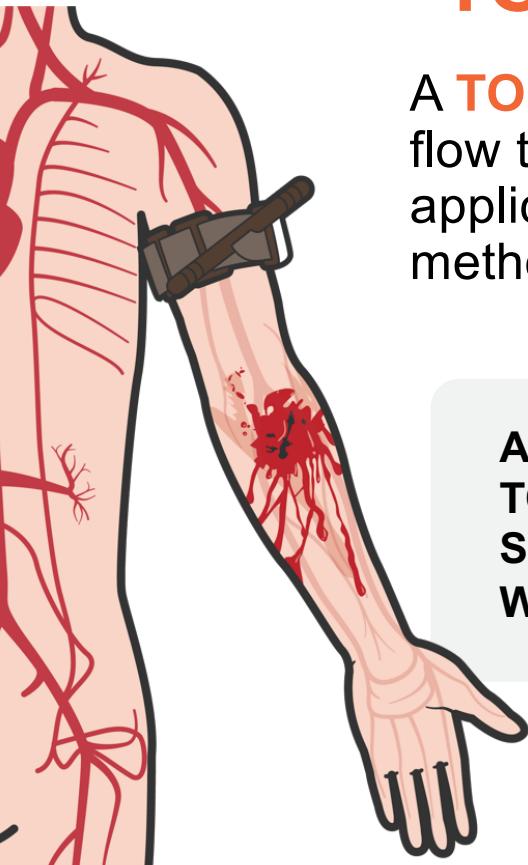

**WINDLASS
ROD**

**WINDLASS
CLIP**

C-A-T® G7 NSN
6515-01-521-7976
(Combat Application
Tourniquet)

TOURNIQUET APPLICATION

A **TOURNIQUET** cuts off blood flow to an arm or leg past the application site; this is the best method to control massive bleeding

APPLY A
TOURNIQUET AND
STOP BLEEDING
WITHIN

M A R C H

WHEN AND HOW TO APPLY A TOURNIQUET (TQ):

CARE UNDER FIRE/THREAT
HASTY TQ *"High and Tight"* on the wounded extremity or when the bleeding source is uncertain

TACTICAL FIELD CARE
DELIBERATE TQ applied 2-3 inches above the wound

Apply a **SECOND TQ** if bleeding is not stopped with one properly applied TQ
(Note: a severe bleeding wound to the thigh frequently requires a **SECOND TQ**)

COMMON ERRORS WHEN PERFORMING TOURNIQUET APPLICATION

#1

Self-adhering strap
not pulled tight
enough at onset of
application

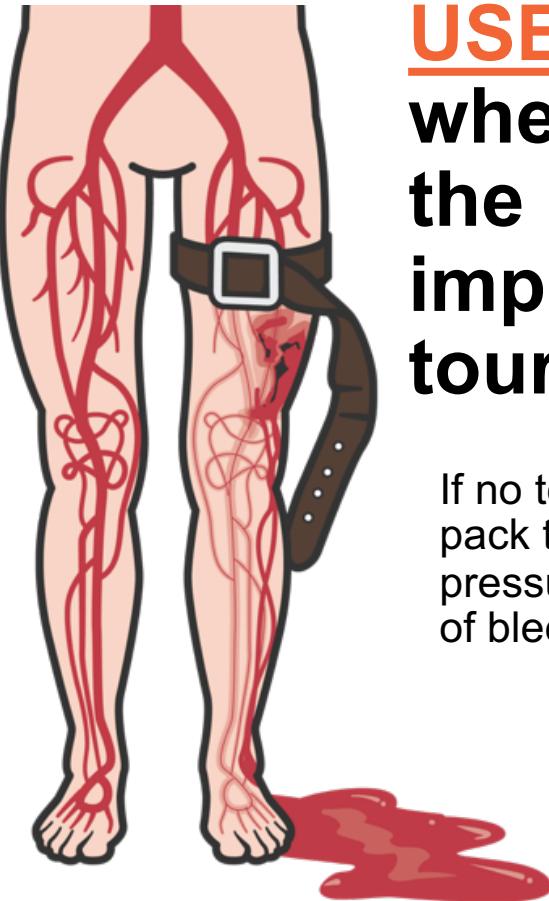

#2

Windlass rod
not twisted tight
enough to stop
bleeding

#3

Tourniquet not
applied fast enough
(bleeding stopped at
1 minute; fully
secured at 3 minutes)

IMPROVISED TOURNIQUET

USE CAUTION
**when considering
the use of an
improvised
tourniquet!**

If no tourniquet is available,
pack the wound and hold direct
pressure over the main source
of bleeding

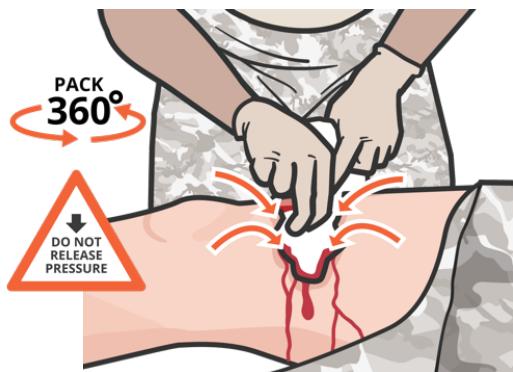

**RISKS ASSOCIATED
WITH IMPROVISED
TOURNIQUETS:**

- | **DAMAGE** may occur to skin if the band is too narrow
- | Bleeding may **WORSEN**
- | Bleeding **MAY NOT BE
COMPLETELY CONTROLLED**
- | An improvised tourniquet may likely **LOOSEN** over time from not being properly secured

M A R C H

APPLY DIRECT PRESSURE AND PACK WOUND

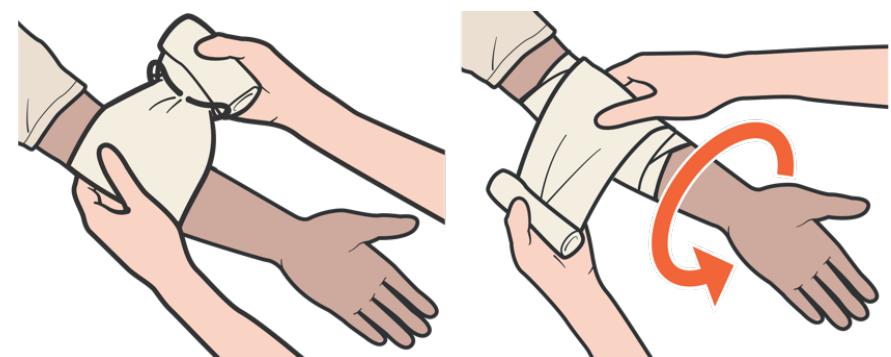

PACK tightly using a **HEMOSTATIC Dressing** that contains a special agent that promotes blood clotting or a clean cloth, if dressing not available

APPLY FIRM, DIRECT PRESSURE for at least 3 mins or until the bleeding stops

WRAP BANDAGE tightly around injured extremity

APPLY using short tugs evenly around the extremity while maintaining continuous tension on the bandage so pressure is maintained

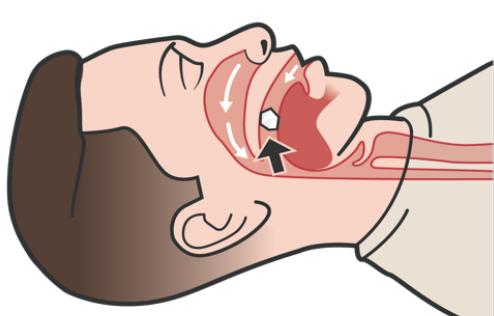

M A R C H

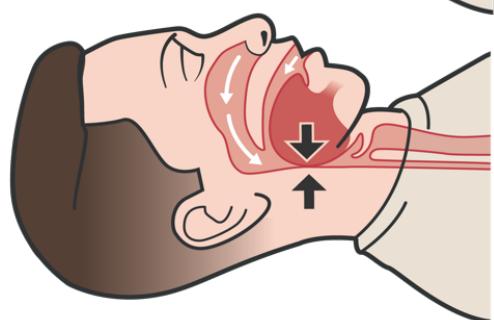

M A R C H
AIRWAY

CLEARING THE AIRWAY

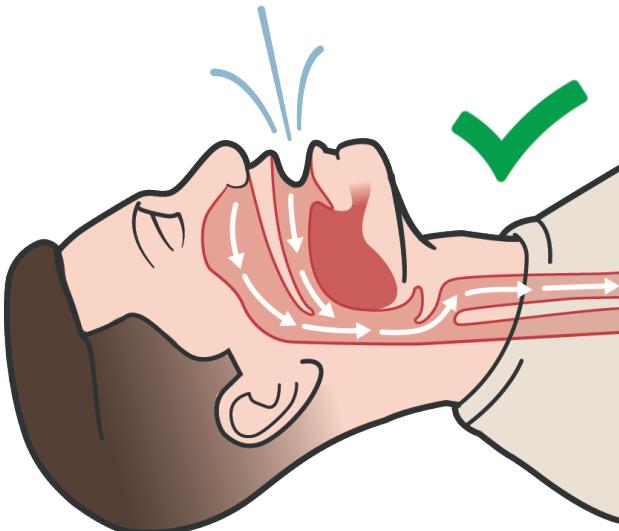

Ensure AIRWAY IS NOT BLOCKED

X

X

SIGNS AND SYMPTOMS AIRWAY MAY BE BLOCKED:

- Casualty is in distress and indicates they can't breathe properly
- Casualty is making snoring or gurgling sounds
- Visible blood or foreign objects are present in the airway
- Severe trauma to the face

IMPORTANT! Remove any visible objects, but do not perform a blind finger sweep

M A R C H

In a **CASUALTY** without an airway obstruction,
you can perform the following maneuvers:

Assist a conscious casualty by helping them assume any comfortable sitting-up position that **ALLOWS THEM TO BREATH EASILY**

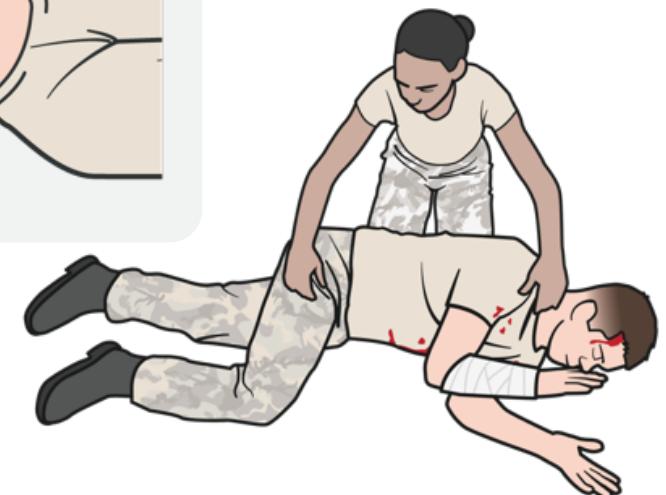

HEAD-TILT CHIN LIFT

JAW-THRUST

For an unconscious casualty not in shock, place them into the **RECOVERY POSITION**

M A R C H

M A R C H

RESPIRATION

ASSESS FOR RESPIRATORY DISTRESS

IMPORTANT! REPORT findings
of *Respiratory Distress* to
medical personnel at the scene

M A R C H

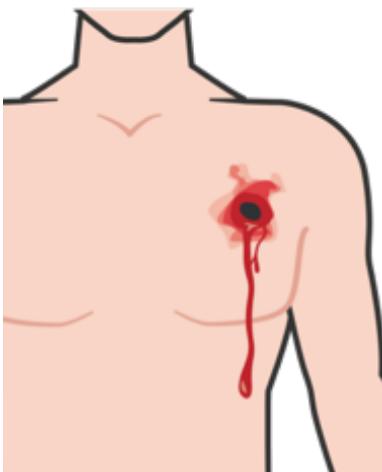

SIGNS OF RESPIRATORY DISTRESS INCLUDE:

- | Difficulty breathing
- | Struggling to get air in and out
- | Breathing is too weak to be effective
(less than 6 times per minute)
- | Rapid breathing
(greater than 20 times per minute)

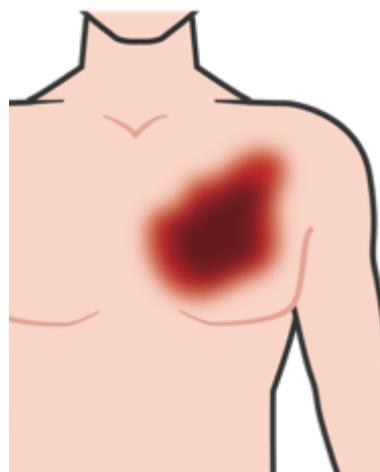

THESE SIGNS MAY ALSO INDICATE A
PENETRATING CHEST WOUND INJURY

ASSESS FOR POTENTIAL LIFE-THREATENING CHEST INJURIES

TYPES OF CHEST INJURY

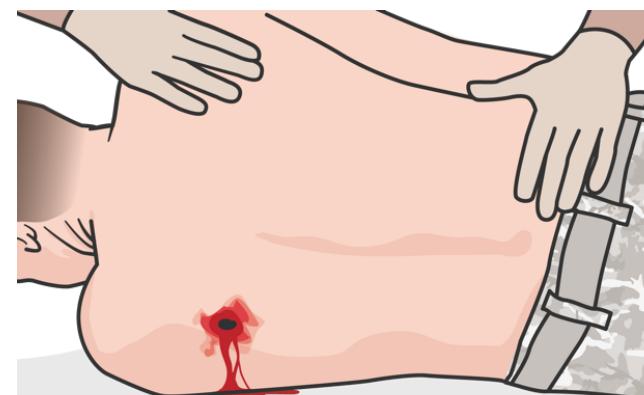

Penetrating
Wounds

Blast
Injury

**ROLL TO EXAMINE FRONT
AND BACK FOR SIGNIFICANT
TORSO TRAUMA**

M A R C H

IMPORTANT

**DO NOT pack
chest wounds
with a hemostatic
(or other) dressing**

**REPORT a
*severe CHEST
INJURY* to
medical personnel
immediately**

M A R C H

CIRCULATION

PREVENT SHOCK by controlling bleeding

#1- Reassess all bleeding control measures are still effective. Ensure tourniquets remain tight

IMPORTANT! Alert medical personnel for signs of shock

Option: Consider elevating both legs higher than the casualty's heart, if their airway tolerates lying flat on their back

M A R C H

SIGNS AND SYMPTOMS OF SHOCK INCLUDE:

- | Rapid breathing
- | Losing focus and having difficulty engaging
- | Sweaty, cool, clammy skin
- | Pale/gray skin

M A R C H

HYPOTHERMIA

PREVENT/ADDRESS HYPOTHERMIA worsened by MASSIVE BLOOD LOSS*

* This is not hypothermia due to cold weather

SOME SIGNS OF HYPOTHERMIA:

Slurred
speech or
mumbling

Slow
breathing &
drowsiness

Shivering

M A R C H

PREVENT HYPOTHERMIA:

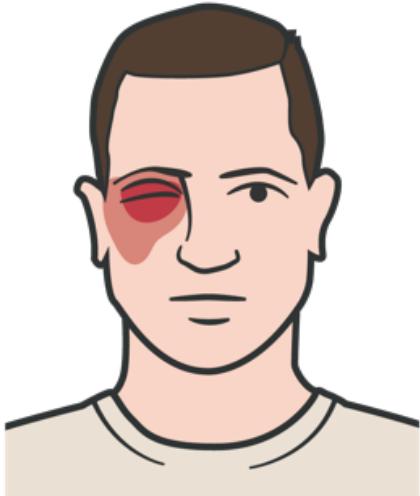

- | Keep clothing on the casualty unless its extremely wet, then remove
- | Cover the casualty with blankets, poncho liners, sleeping bags, or anything that will retain heat
- | Keep casualty off the ground (*increases loss of body heat*)

In addition to

M A R C H

you may need to address
other injuries

SECONDARY INJURIES

eye trauma

head injury

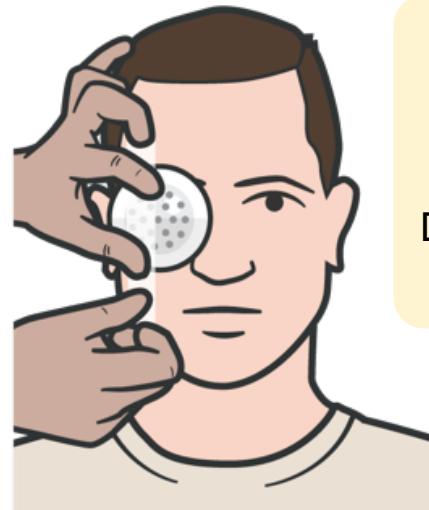

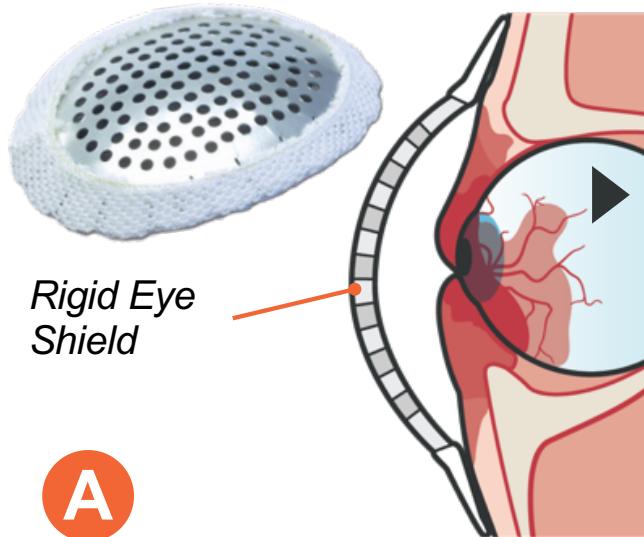

burns

fractures

IF A PENETRATING EYE INJURY IS NOTED OR SUSPECTED, SHIELD THE INJURED EYE

Cover the eye with a **RIGID EYE SHIELD**, not a pressure patch. Place the shield over the injured eye (not both eyes) and tape in place

If no rigid eye shield is available, **TACTICAL EYEWEAR** can also be used to protect the eye

ASSESS FOR **BURNS**

BURNS ARE CLASSIFIED BY THE DEPTH OF THE WOUND.

SUPERFICIAL

1ST DEGREE BURNS

are just like a sunburn, with a reddened appearance of the skin

PARTIAL THICKNESS

2ND DEGREE BURNS

will also have blisters

FULL THICKNESS

3RD DEGREE BURNS

may appear dry, stiff, and leathery, and/or it can also be white, brown, or black

SECONDARY INJURIES

BURN CARE

COVER
the burn area
with dry, sterile
dressings

COVER
the casualty to
prevent heat loss
and keep the
casualty dry

IN CASE OF ELECTRICAL INJURY

Secure the power, if possible.
Otherwise, remove the casualty from the
electrical source using a nonconductive
object such as a wooden stick. Move the
casualty to a safe place.

ASSESS FOR A FRACTURE

**CLOSED FRACTURE****OPEN FRACTURE**

WARNING SIGNS OF A FRACTURE:

- Significant pain and swelling
- An audible or perceived “snap”
- Different length or shape of limb
- Loss of pulse or sensation in the injured arm or leg
- Crepitus (hearing a crackling or popping sound under the skin)

APPLICATION OF A SPLINT

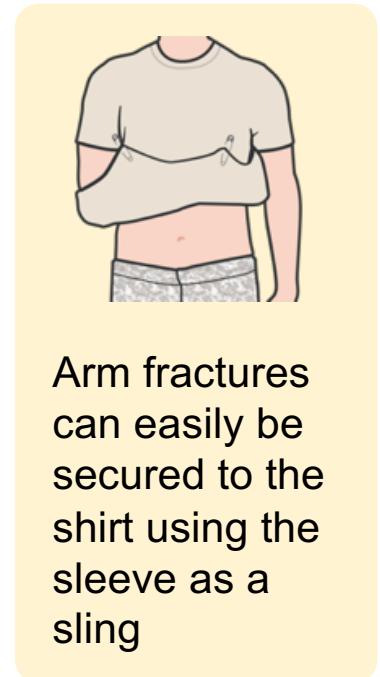

A splint is used to prevent movement and hold an injured arm/leg in place. Use a semirigid splint (like a SAM splint) or improvise using rigid or bulky materials (e.g., boards, boxes, tree limbs, and even weapons):

- | Incorporate the joint **ABOVE AND BELOW** the fracture
- | **SECURE THE SPLINT** with an ace wrap, cravats, belts, or duct tape (if available)
- | Try to **SPLINT** before moving the casualty and minimize movement of the fractured extremity

IMPORTANT! If the bandage is too tight, it can decrease circulation to the fingers or toes

Arm fractures can easily be secured to the shirt using the sleeve as a sling

ASSESS FOR HEAD INJURY

Result of blunt force, acceleration, or deceleration forces (*i.e., explosion or blast events, motor vehicle collision or roll-overs, fall or sports injury*)

Usually **gunshot wounds, stabblings, or fragmentation** from explosives

BLUNT AND PENETRATING HEAD TRAUMA

IMPORTANT! **REPORT** signs and symptoms of a head injury to medical personnel at the scene

SIGNS AND SYMPTOMS OF HEAD INJURY INCLUDE:

- Altered consciousness
- Disorientation or dizziness
- Headache
- Ear ringing
- Amnesia
- Nausea/vomiting
- Double vision

COMMUNICATE:

1. WITH THE CASUALTY

Encourage, reassure, and explain care

2. WITH TACTICAL LEADERSHIP

Provide leadership with the casualty status and location

3. WITH MEDICAL PERSONNEL

Discuss the casualty's injuries and symptoms, as well as any medical aid provided with the responding medics

▲ DD Form 1380

DD Form 1380, JUN 2014 TCCC CARD

DOCUMENT:

1. CASUALTY ASSESSMENT FINDINGS

2. MEDICAL AID RENDERED

3. CHANGES IN CASUALTY STATUS

Attach the DD Form 1380 to the casualty's belt loop, or place it in their upper left sleeve or the left trouser cargo pocket

TEST ON KNOWLEDGE

You have encountered an active shooter situation. An unconscious casualty has sustained multiple gunshot wounds.

Your assessment reveals the following: two open chest wounds from apparent gunshots, and bright red blood squirting from the lower right thigh. The casualty is in respiratory distress.

What is the most important priority in the care of this casualty?

- 1. Airway maneuvers**
- 2. Wound packing of the right thigh**
- 3. Tourniquet to the right thigh**
- 4. Pressure dressing to the right thigh**

Using the

TCCC

standard of care in
Prehospital Battlefield
Medicine

...following the

M A R C H

sequence to perform a
**RAPID CASUALTY
ASSESSMENT**

...and providing

**LIFESAVING
SKILLS**

YOU can
SAVE A LIFE!

YOUR JOB as a First Responder is to TAKE ACTION:

PROVIDE

5 TCCC LIFESAVING

SKILLS until medical personnel arrive at the scene
